Building, deploying, and iterating scalable apps is my passion. Supporting teams with a culture of care and group guidance is always my goal. As a creative technologist I believe in a holistic view of development, that technology can empower strategy, and that it's the collaboration and communication between people that dictate successful projects.

Amp Agency - Director of Front-End Technology *Aug 2018 - Present*

Amp is a high paced digital agency where I helped build and improve our front-end practice. I doubled our discipline from 4 to 8 full time engineers and successfully introduced GraphQL to our process. We've built innovative progressive web apps for high fashion clients that launched on time and quantitatively improved our client's revenue.

Intel - Sr. Front End Developer *June 2016 - Aug 2018*

The scope of what is possible with Intel's global network of people and infrastructure is astounding. My group, Intel's Agency Inside, crafted complex global campaigns for the 2018 Winter Olympics, SuperBowl LI, and many major business groups (10B+) on our way to AdAge's In-House Agency of the Year and multiple Cannes Lions. In my role I pitch new ways to utilize technology in our work and lead teams in executing sites, apps, installations, and other campaign deliverables.

PresenceLearning - Front-End Architect *Dec 2014 - June 2016*

My work at this venture backed startup in the heart of San Francisco helps students with speech and disability issues across the country receive online therapy. As the fourth employee on the product team I led the effort to revitalize and recode our online telehealth platform. Previously a flash app, this HTML5 responsive and touch optimized experience utilizes video conferencing via WebRTC, realtime whiteboarding / therapeutic activities, and a user experience focused on advancing student outcomes.

Razorfish - Presentation Layer Architect *Jul 2011 - Dec 2014*

Razorfish is stocked to the gills with smart people that I had the pleasure of working with. In my time at this agency I led international teams in creating, developing, deploying and maintaining projects for Delta, AT&T, T-Mobile and Intel. These projects ranged in scope and implementation from e-commerce web applications to iOS and facebook apps.

Koncept Design Studio - Web Developer *Oct 2009 - Jul 2011*

During my time at Koncept I oversaw client engagement and interactive development as projects moved from new business to delivery. I evangelized and ideated the successful switch from flash development to HTML. Along with new processes, I helped the business target mobile as a critical emerging market.
